*Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to computer-implemented methods of generating a 3-D representation of a target sequence wherein the entire target sequence is used, classified in class 702, subclass 19.
- II. Claims 9-11, drawn to computer-implemented methods of generating a 3-D representation of a target sequence wherein identity constraints, 2-D constraints, and tertiary constraints are used, classified in class 702, subclass 19.
- III. Claims 12-13, drawn to computer-implemented methods of generating a 3-D representation of a target sequence wherein an alignment of the target sequence with another sequence is used, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

Each of Inventions I-III are independent and distinct from one another as they are differing methods having differing steps and using differing data and differing programming to carry out said methods. As such, the searches for each method would not be co-extensive in scope, and would pose an undue burden upon the examiner if not restricted.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1631

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
